

### CLAIM AMENDMENTS

Claim 1. (currently amended) A method pertaining to the transportation of an alarmed container, particularly with respect to the transportation of valuable objects or valuable documents ~~for instance~~, wherein the container (1) includes a first electronic unit (2) which can function to accept and permit deactivation and/or opening of the container, and wherein a primary key (10) by means of which the container can be opened includes a second electronic unit (12) for communication with the first electronic unit (2) so as to initiate opening of the container, said container including means for destroying the valuable objects or documents contained therein unless said container is deactivated by a complete code-set (ABCD) when opening the container, characterised in that a person transporting the container (1) carries the primary key (10), the steps of said method comprising ~~wherein~~ opening and/or deactivation of the container (1) at an intended destination ~~is effected~~ with the aid of a code subset (AB) from said person-carried primary key (10) in simultaneous co-action with a code subset (CD) from a secondary key (20) located at said intended destination, ~~said co-action and~~ providing ~~a~~ said complete code-set (ABCD) from said simultaneous co-action between said primary and secondary keys for initialising opening/deactivation of said container without destroying the valuable objects or documents within said container.

Claim 2. (previously presented) A method according to Claim 1, characterised in that the secondary key (20) includes a third electronic unit (22) that contains a subset (CD) of the complete code-set (ABCD) required to initiate deactivation and/or opening of the container (1).

Claim 3. (currently amended) A method according to Claim 1, characterised ~~in that~~ by the step of, in the case of a transportation route (100) that includes a number of delivery destinations/collecting destinations (110, 120, 130), ~~there is placed~~ placing at said delivery/collecting destinations secondary keys (20) that have mutually varying code subsets; and opening or deactivating the container by ~~that~~ said person-carried primary key (10) in co-action with code subsets (CE, EF, GH) from said respective secondary keys (20) ~~enables the container to be opened/deactivated~~ at said respective delivery/collecting destinations ~~destination places~~ (110, 120, 130) along ~~a~~ said transportation route (100) ~~, for instance.~~

Claim 4. (currently amended) A method according to Claim 1, characterised by the step of opening/deactivating the container within a predetermined time interval at a predetermined ~~in that opening/deactivation of the container in respect of a given destination (110, 120, 130) is limited to a given time interval .~~

Claim 5. (currently amended) A method according to Claim 1, characterised by the step of opening/deactivating the container

~~in that opening/deactivation of a container in respect of a given~~  
~~at a predetermined destination (110, 120, 130) is limited to a~~  
~~limited only within a predetermined geographical area.~~

Claim 6. (currently amended) A method according to Claim 1, characterised by the step of blocking a lost said primary key (10) and replacing the lost primary key with a new said primary key (10) containing a new said code subset, and simultaneously by modifying said complete code set for opening/deactivation ~~the opening code/deactivation code~~ of the container (1) ~~at the same time~~.

Claim 7. (currently amended) A method according to Claim 1, characterised by the step of blocking a lost said secondary key (20) and replacing said lost secondary key with a new said secondary key (20) that contains a new said code subset, and simultaneously by modifying said complete code set for opening/deactivation ~~the opening code/deactivation code set~~ of the container (1) ~~at the same time~~.

Claim 8. (currently amended) An arrangement for carrying out the method according to Claim 1, characterised in that ~~the arrangement comprises a~~ said primary key (10) ~~that includes an~~ said second electronic unit (12) in which said code-subset is stored; and in that said second electronic unit (12) is encapsulated in a first casing (11).

Claim 9. (currently amended) An arrangement according to Claim 8, characterised in that ~~said arrangement further comprises~~ ~~a~~ said secondary key (20) which includes a third ~~an~~ electronic unit (22) or a memory unit for storing a code subset; and in that said third electronic unit (22) or memory unit is encapsulated in a second casing (21).

Claim 10. (currently amended) An arrangement according to Claim 8, characterised in that the arrangement comprises said ~~a~~ secondary key (20) that includes a memory unit in the form, ~~e.g.,~~ of a memory card or a wire memory for storage of relevant code subsets, wherein ~~e.g. the~~ a serial number of said memory unit constitutes a relevant code subset (CD, EF, GH ~~, etc.~~).

Claim 11. (currently amended) A method of using said ~~The use of a~~ primary key (10) and a number of said secondary keys (20) in accordance with Claim 1, characterised in that the primary key (10) and the secondary keys ( ~~10,~~ 20) are used in conjunction with security transport to different geographical destinations.

Claim 12. (currently amended) A method according to Claim 2, characterised ~~in that~~ by the step of in the case of a transportation route (100) that includes a number of delivery destinations/collecting destinations (110, 120, 130), ~~there is placed~~ placing at said delivery/collecting destinations secondary keys (20) that have mutually varying code subsets; and opening or

deactivating the container by ~~that~~ said person-carried primary key (10) in co-action with code subsets (CE, EF, GH) from said respective secondary keys (20) ~~enables the container to be opened/deactivated~~ at said respective ~~destination~~ delivery/collecting destinations (110, 120, 130) along ~~a~~ said transportation route (100) ~~for instance~~ .

Claim 13. (currently amended) An arrangement according to Claim 9, characterised in that the arrangement comprises ~~a~~ said secondary key (20) that includes a memory unit in the form ~~of~~ e.g. of a memory card or a wire memory for storage of relevant code subsets, wherein ~~e.g. the~~ a serial number of said memory unit constitutes a relevant code subset (CD, EF, GH ~~etc.~~).

Claim 14. (currently) An arrangement for carrying out the method according to Claim 2, characterised in that the arrangement comprises ~~a~~ said primary key (10) that includes ~~an~~ said second electronic unit (12) in which said code-subset is stored; and in that said second electronic unit (12) is encapsulated in a first casing (11).

Claim 15. (currently amended) An arrangement for carrying out the method according to Claim 3, characterised in that the arrangement comprises ~~a~~ said primary key (10) that includes ~~an~~ said second electronic unit (12) in which said code-subset is stored; and in that said second electronic unit (12) is encapsulated in a first casing (11).

Claim 16. (currently amended) An arrangement for carrying out the method according to Claim 4, characterised in that the arrangement comprises ~~a~~ said primary key (10) that includes ~~an~~ said second electronic unit (12) in which said code-subset is stored; and in that said second electronic unit (12) is encapsulated in a first casing (11).

Claim 17. (currently amended) An arrangement for carrying out the method according to Claim 5, characterised in that the arrangement comprises ~~a~~ said primary key (10) that includes ~~an~~ said second electronic unit (12) in which said code-subset is stored; and in that said second electronic unit (12) is encapsulated in a first casing (11).

Claim 18. (currently amended) A method of using said ~~The use of a~~ primary key (10) and a number of said secondary keys (20) in accordance with Claim 2, characterised in that the primary key (10) and the secondary keys ( ~~10,~~ 20) are used in conjunction with security transport to different geographical destinations.

Claim 19. (currently amended) A method of using said ~~The use of a~~ primary key (10) and a number of said secondary keys (20) in accordance with Claim 3, characterised in that the primary key (10) and the secondary keys ( ~~10,~~ 20) are used in conjunction with security transport to different geographical destinations.

Claim 20. (currently amended) A method of using said ~~The use of a~~ primary key (10) and a number of said secondary keys (20) in accordance with Claim 4, characterised in that the primary key (10) and the secondary keys ( ~~10,~~ 20) are used in conjunction with security transport to different geographical destinations.
